

METHOD OF PROMOTING THE TAKE OF NITROGEN
FIXING MICROORGANISMS TO PLANTS BY
MAKING USE OF RADIATION TREATMENT

ABSTRACT OF THE DISCLOSURE

5 A method of enhancing the take of a nitrogen fixing
microorganism by exposing it to low-energy electron beams,
wherein the energy of electron beams is so controlled that
an adequate dose for enhancing the take of the nitrogen
fixing microorganism on the root of a plant is applied to
10 the desired site on the epidermis of the plant's tissue.
